ABOUT

Hi, I'm Jess.

I'm a product design student at Michigan, graduating December 2026, and most of my job is subtraction. I design enterprise tools and AI products: identity software, trade compliance, and one civic seed library that won an award. The work I like best starts as a mess and ends looking obvious.

FOCUS

Enterprise & AI product design

EXPERIENCE

Where I've worked

SailPoint UX Design & Research Intern

IDENTITY SECURITY · HYBRID · SUMMER 2026

Designing trust into an AI-generated source configuration wizard for identity administrators — a group whose job is to be skeptical of automated access changes.

Copperhill Product Design Intern

TRADE COMPLIANCE · LIVONIA, MI · JUN–AUG 2025

Rebuilt the authentication workflow for 2,000+ daily users and shipped Design System 2.0, cutting engineering handoff questions by 65%.

Siemens Energy UX & Graphic Design Intern

SHANGHAI, CHINA · JUN–AUG 2024

Restructured the information architecture of an omnichannel web platform for international stakeholders, cutting click-depth 60% through progressive disclosure.

SELECTED WORK

Four projects, four different constraints.

01	SailPoint	Enterprise · Identity Security
02	UM Seed Library	Phygital · Civic
03	Copperhill	B2B SaaS
04	UM GPT	AI · EdTech · Independent Extension

ENTERPRISE · IDENTITY SECURITY

SailPoint

IN PROGRESS

UX Design & Research Intern · Summer 2026 · Solo · Figma, Claude

Identity administrators are paid to distrust automated access changes, and SailPoint needed them to trust an AI-generated source configuration enough to act on it. I rebuilt the wizard on the current design system, cut the competing icons quietly undermining trust in the AI, and designed the recovery paths for when it got things wrong.

PHYGITAL · CIVIC

UM Seed Library

Product Designer · Aug 2025 – Mar 2026 · 4-person team

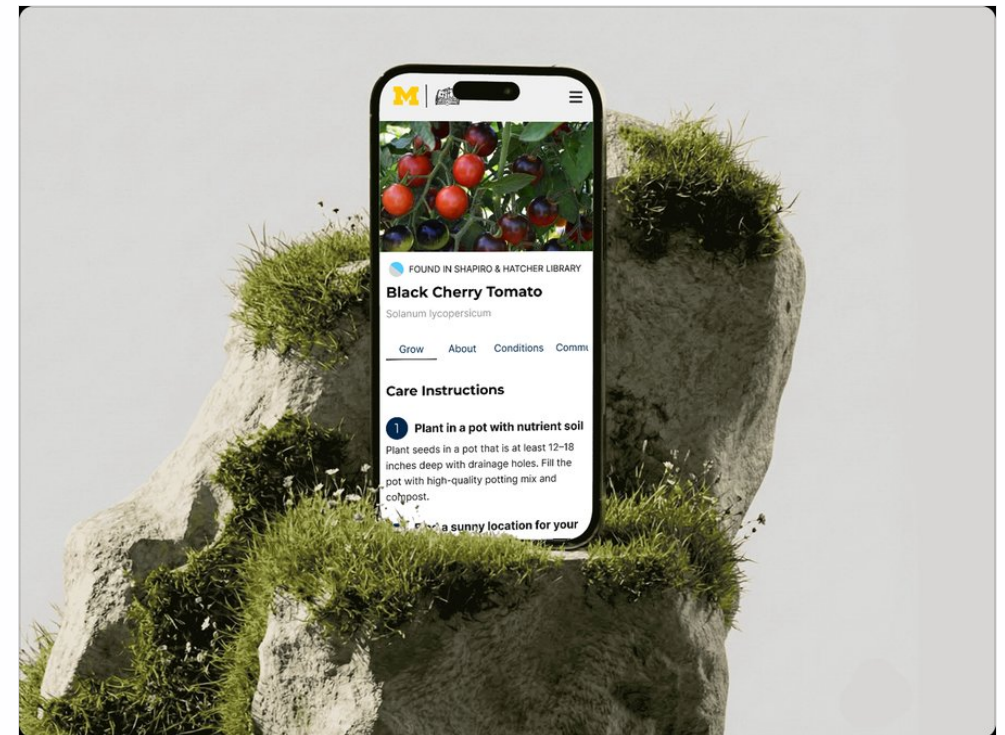

85% of students had never heard of a free campus seed library, and 96% of the flows we watched never finished. We cut the physical checkout from three touchpoints to two and reordered instructions to match how people actually used the machine. I led the design system, plus the homepage and events experience.

B2B SAAS

Copperhill

Product Design Intern · Jun – Aug 2025 · Solo designer, 4 engineers

Copperhill runs trade compliance for global shipments. Analysts could find a problem in the data but couldn't act on one without leaving the platform for Outlook and losing the thread. I shadowed analysts, then designed a supplier Q&A workflow directly into the tables they already worked in.

~60%

faster supplier-question review — observed 8 min
down to ~3 min

95%

reduction in out-of-app batch email for parts clarification

versions shipped to beta with real customers

AI • EDTECH • INDEPENDENT EXTENSION

UM GPT

Product Designer • Sep–Dec 2025 + ongoing • Solo • Figma, Lovable, Claude

Students juggled four AI and communication platforms to finish one group project, losing formatting, prompts, and threads at every handoff. I built three features with Lovable, Figma Make, and Claude as design partners — none produced a usable first draft. Every correction came from holding AI output against what students actually told me.
